

Chenghao Feng

CONTACT 10100 Harry Ransom Trl, Austin, TX 78758
INFORMATION *E-mail:* fengchenghao1996@utexas.edu
Website: fengchenghao1996.github.io

AREA OF INTEREST Design, simulation, and testing of integrated photonic chips(silicon photonics); Device/circuit/system design and validation for high-performance computing, interconnect, and other mixed-signal applications; Electronic-photonic design automation.

EDUCATION **The University of Texas at Austin**, Austin, TX
Ph.D., Department of Electrical and Computer Engineering (Aug. 2018-May. 2023)

- Advisor: Ray T. Chen
- Co-advisor: David Z. Pan

Nanjing University, Nanjing, China
B.S. in Physics, (2014-2018)

WORK EXPERIENCE **Alpine Optoelectronics Inc.**, Fremont, CA, USA. **May, 2023 - present**

Senior silicon photonics design engineer, Alpine engineering and R&D department

- **Silicon photonic device design:** Design and develop silicon photonic devices for next-generation optical interconnect products.

Meta Platforms Inc., Menlo park, CA, USA. **May, 2022 - Aug, 2022**

Hardware engineer intern, Meta, Optical Technologies AI/HPC

- **2x400G optics validation:** Worked on host compliance test for 2x400G OSFP optical modules; Worked on unifying HTX settings of 2x400G optical modules .
- **Silicon photonic device design:** Built a fully-automated design flow to run FDTD/MODE simulations on Lumerical using Python APIs. Designed photonic devices using foundry process files.

RESEARCH PROJECTS **The University of Texas at Austin**, Austin, TX, USA. **August, 2018 - May, 2023**

Graduate research assistant

- **Hardware-efficient photonic neural chips:** Worked on three photonic neural chip tape-outs for novel optical neural network (ONN) architectures using Advanced Micro Foundry (AMF) and AIM photonics; worked on the full-stack schematic design, layout, validation of photonic neural chips using Lumerical Device/Mode/Interconnect, Synopsys optodesigner, and PyTorch; collaborated on optoelectronic co-packaging; designed PCBs (TIA, DAC driver, ADCs) to control photonic chips; built a automated and programmable testing setup using Python APIs; tested the performance of the photonic neural chip; Collaborated with a software team on training the photonic neural chip; Proposed and demonstrated a hardware-efficient photonic neural network architecture.
- **Photonic neural network hardware-software co-design:** Collaborated on designing high-throughput and low-power photonic ONN architectures ; helped verify the functionality of photonic parts using Lumerical Interconnect.

- **Electronic-photonic digital computing chip:** Worked on electronic-photonic digital computing chip tape-out for photonic logic functional units using AIM photonics; worked on the design, layout, validation, tape-out, performance evaluation, and high-speed measurement of the photonic chips; worked on modeling of high-speed silicon photonic microring modulators; processed modeling and experimental data using Matlab; Proposed and demonstrated a 20 Gb/s electronic-photonic comparator and a 20 Gb/s electronic-photonic decoder/multiplexer that can outperform the state-of-the-art transistor-based circuits in speed and power consumption.
- **Electronic-photonic digital full adder:** Collaborated on the architecture design, high-speed measurement, and performance evaluation of an electronic-photonic full adder fabricated by AIM photonics. Collaborated on proposing and the idea of electronic-photonic arithmetic logic unit.
- **Modeling of high-speed silicon photonic modulators:** Modeled and analyzed high speed properties of cascaded EO microring/microdisk modulators in optical computing systems using Matlab and Lumerical Interconnect. Provided the solutions to increase the optical bandwidth of the microresonator-based modulators and the accuracy of the optical digital computing circuits.

Nanjing University, Nanjing, China.

August, 2017 - June, 2018

Undergraduate research student

- **Arbitrary Complex Brag Grating Waveguide:** Developed and optimized codes to design the arbitrary complex Brag grating waveguide using inverse-design algorithms. Improved the simulation time complexity and scaled down the size of the structure using MATLAB, Lumerical MODE, and Lumerical FDTD. Modeled the dispersion of silicon Brag grating waveguide and improved the simulation accuracy.
- **The Electrical Properties of a P-I-N-based optical Modulator :** Analyzed the impedance and modulation performance of a p-i-n-diode-based electrooptical modulator under high modulation frequency using Lumerical DEVICE and MODE.

VOLUNTEERING
EXPERIENCES

Reviewers: Photonics Research; IEEE Journal of Selected Topics in Quantum Electronics; Optics Letters; Optics Express; Optics and Lasers in Engineering; Optics and Laser Technology; Photonic Network Communications; Scientific Reports; Applied Optics; Optics Communications; Optical and Quantum Electronics; IEEE Transactions on Nanotechnology; Photonics; Fractalfract; ISVLSI.

HONORS AND
AWARDS

Winner at Synopsys Robert S. Hilbert Memorial Optical Design Competition	2022
Provost's International Graduate Excellence Fellowship. UT Austin	2018 - 2021
Best paper award. ASP-DAC	2020
Zheng Gang Scholarship. Nanjing University	2017
Dalian Institute of Chemical Physics, Chinese Academy of Sciences' Scholarship.	2016
Top-notch Program Scholarship. Nanjing University	2015 - 2017

RELATED COURSES EE 383V-1 Nanophotonics; EE 383P-8 Optical Communications; EE 396K-21 Nanoscale Device Physics/Technology; EE 382M-7 VLSI I; EE 382N-14 High-speed computing arithmetic I; EE 380L-10 Data mining; EE 383V Modern Optics; EE 382N-1 Computer Architecture; ME 397 Intelligent nano-world; EE 381V Unconventional computation; EE-382M Analog integrated circuit design.

SKILLS

- **Programming Languages:** Python (PyVISA, lumapi, PyTorch), C, Matlab, Verilog
- **Simulation Tools:** Lumerical Solutions; Ansys HFSS
- **EDA Tools:** Synopsys photonic solutions(Optodesigner, Optsim), Gdsfactory, Lucedata ipkiss3, Klayout, Cadence Virtuoso(OCEAN), Synopsys Design Compiler
- **Experimental skills:** Die-level and transceiver-level test automation skills; Familiar with using lab equipment such as DCA, VNA, BERT, tunable laser, OSA and etc; Basic PCB assembly skills; Basic skills of fabrication such as E-beam lithography and plasma-etching. Knowledge of specification documents such as IEEE 802.3ck, CMIS, and OIF-CEI.
- **Chip tape-out:** 2+ industry tape-out experience of silicon photonic integrated circuits, 5+ academic tape-out experience of silicon photonic integrated circuits, familiar with 4+ photonic foundries. 5+ years' experience in design, simulation, and modeling of photonic integrated circuits and devices. Experience of PCB design for controlling photonic integrated circuits.
- **Photonic circuit and device design:** Device-level design automation skills using Lumerical Solutions and Python APIs; Familiar with high-speed ring/disk modulators, MZI modulators, filter, phase shifter, thermo-optic switch, broadband splitters, directional couplers, and other passive devices.
